EXPERIENCE

Graphcore

April 2025 – Present

Machine Learning Engineer – Applied AI

Bristol, UK

- Developed high-performance Triton kernels (MXFP4 MoE, Flash Attention, RoPE) for our custom accelerator.
- Develop pre-training infrastructure for large MoE models focusing on load-balancing.
- Presented workshop paper at NeurIPS: [Variational Entropy Search is Just 1D Regression](#).
- Contributed to PyTorch: Pipeline parallelism deadlock fix with Gloo (#152938), SDPA MATH backend reference implementation fix (#163508).

Cisco Meraki

June 2023 – April 2025

Machine Learning Engineer – Camera Intelligence Team

London / Remote, UK

- Led cross-camera tracking from idea to Beta release; presented at Cisco Live 2025.
- Technical lead of 6 engineers across firmware, model training, inference optimization, system architecture.
- Designed high-performance C++ inference engine and distributed k-NN search across camera mesh networks, enabling real-time retrieval across thousands of cameras with zero backend load.
- Built multimodal dataset (200K+ objects, synthetic and human-labelled) and fine-tuned CLIP-based models for zero-shot object retrieval.

University of York

June 2023

BEng. Computer Science – First Class with Honours

PROJECTS

On-Policy quantization

December 2025

- Researching LLM quantization via on-policy distillation. FP32 teacher guides MXFP4 student on its own generations rather than static datasets.

GPUMODE NVFP4 GEMM Competition

November 2025

- Fastest GEMM and GEMV Triton submission, with 4x speedup over baseline. [Annotated NVFP4 GEMM](#).

Parscale Cross-Attention

August 2025

- Extension to Bytedance's [PARSCALE](#) enabling data-dependent communication between parallel replicas via cross-attention.

Nano Diffusion LLM

July 2025

- "Nano" training and inference script for diffusion language models that generate text via iterative denoising. Implements [masked diffusion](#) (LLaDA-style) and [Duo](#) (flow-based, self-correcting).

Blender Copilot

January 2025

- Blender plugin for generating 3D meshes from text prompts. Modal for inference, FastAPI / FastHTML backend.
- [Demo](#).

xverify – GBNF structured generation

March 2025

- Auto-generated GBNF grammars from Pydantic models. Integrates with RLVR for tool use / structured outputs.

Algorithmic Trading – Horse Racing

September 2020 – July 2021

- Statistical arbitrage on mispriced "each-way" and "extra-place" bets with three-way Kelly Criterion sizing based on conditional place probabilities. Profitable but low volume until banned.

SKILLS

Languages

Python, C++, Triton, CUDA.

ML

PyTorch, TorchTitan, Faiss, Slurm, Kubernetes, wandb.
